

DRIVE-IN

USP Drive-In rack can save warehouse space by eliminating aisles for maximum high density storage. Drive-In can help you to more effectively utilize your space and gain up to 60% in total useable storage area over standard selective rack configurations.

With forklift entry on one face of the rack, Drive-In is ideal for first-in / last-out inventory systems.

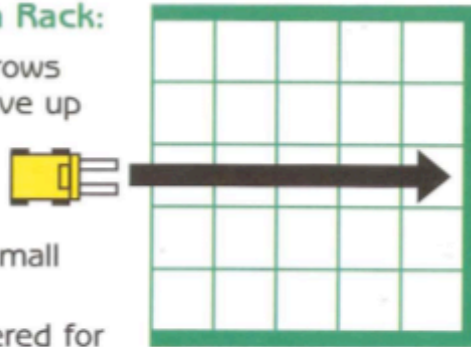

USP also offers optional reinforced entries, heavy-duty bracing, debris deflector bases, floor guides and recessed leg frames.

Advantages of USP Drive-In Rack:

- No aisles needed between rows of rack for fork trucks to drive up & down. Fork trucks drive directly in to the rack.
- High density storage can be achieved in a relatively small space.
- USP Drive-In rack is engineered for quality, stability and durability.
- Powder coat finish: All Drive-In components have a high-gloss baked polyester powder coat finish, available in a wide range of colors.
